

User Manual & Problem-Solving Guide

How to run every part of the system — from pickup to payment —
and what to do when the screen says something is wrong.

Contents

How to use this booklet: Parts I–III teach the daily work. When something goes wrong, turn to Part IV and find the message you see on screen — the red text in this booklet matches the app word for word.

Part I · Getting started

- 1 About GreenCycle ERP
- 2 Roles and sign-in
- 3 The screen and the dashboard

Part II · Daily work

- 4 Customers, sites and contracts
- 5 Pickups, schedule and field collection
- 6 Weighbridge
- 7 Processing and stock
- 8 Sales, purchases and expenses
- 9 Billing, receipts and outstanding
- 10 Accounts, GST and reports

Part III · Running the system

- 11 Administration
- 12 Starting, stopping and backing up

Part IV · Problems and solutions

- A Installing and starting
- B Signing in and permissions
- C Pickups, collection and weighbridge
- D Processing and stock
- E Sales, billing and accounts
- F Documents, email and exports

Appendix

- Daily and monthly checklists

PART I

Getting started

What the system is, who uses it, and how to find your way around.

1

About GreenCycle ERP

GreenCycle ERP runs a non-hazardous waste management business from first customer call to final payment. Every step is recorded once and flows into the next, so stock, invoices, accounts and reports always agree.

What the system does for you

- Calculates net weight from the weighbridge — nobody types it.
- Refuses processing batches that do not balance.
- Blocks a sale larger than the stock you hold.
- Bills each weighment or trip once, at the rate valid on that day.
- Posts every money transaction to the ledger and GST registers.
- Records who did what, when, and what changed.

What it never does

- Delete business records. Mistakes are **cancelled** with a reason, and stock and accounts are reversed.
- Let one role see another role's work without permission.
- Handle hazardous or e-waste — those are outside this system.
- Replace your auditor: statutory returns are finalised by your accountant.

2

Roles and sign-in

Each person signs in with their own username. The left menu shows only the modules their role allows.

ROLE	TYPICAL PERSON	WORKS IN
Administrator	Owner / IT	Everything, including users, settings, weight override, stock override
Management	Directors	Read-only view of every module, dashboard and profit reports
Operations	Operations supervisor	Customers, sites, pickups, schedule, collections, vehicles, drivers
Weighbridge / Store	Weighbridge operator	Gate in / gate out, stock movements
Processing	MRF supervisor	Processing batches
Sales / Purchase	Commercial team	Recyclable sales, buyers, purchases, suppliers
Accounts	Accountant	Invoices, receipts, payments, expenses, accounts, GST

Signing in

- 1 Open the app address in your browser (on the office computer: **http://localhost:3000**).
- 2 Type your username and password and press **Sign in**.
- 3 First time? You will be asked to set a new password under **My profile**.
- 4 To leave, click your initials at top right → **Sign out**.

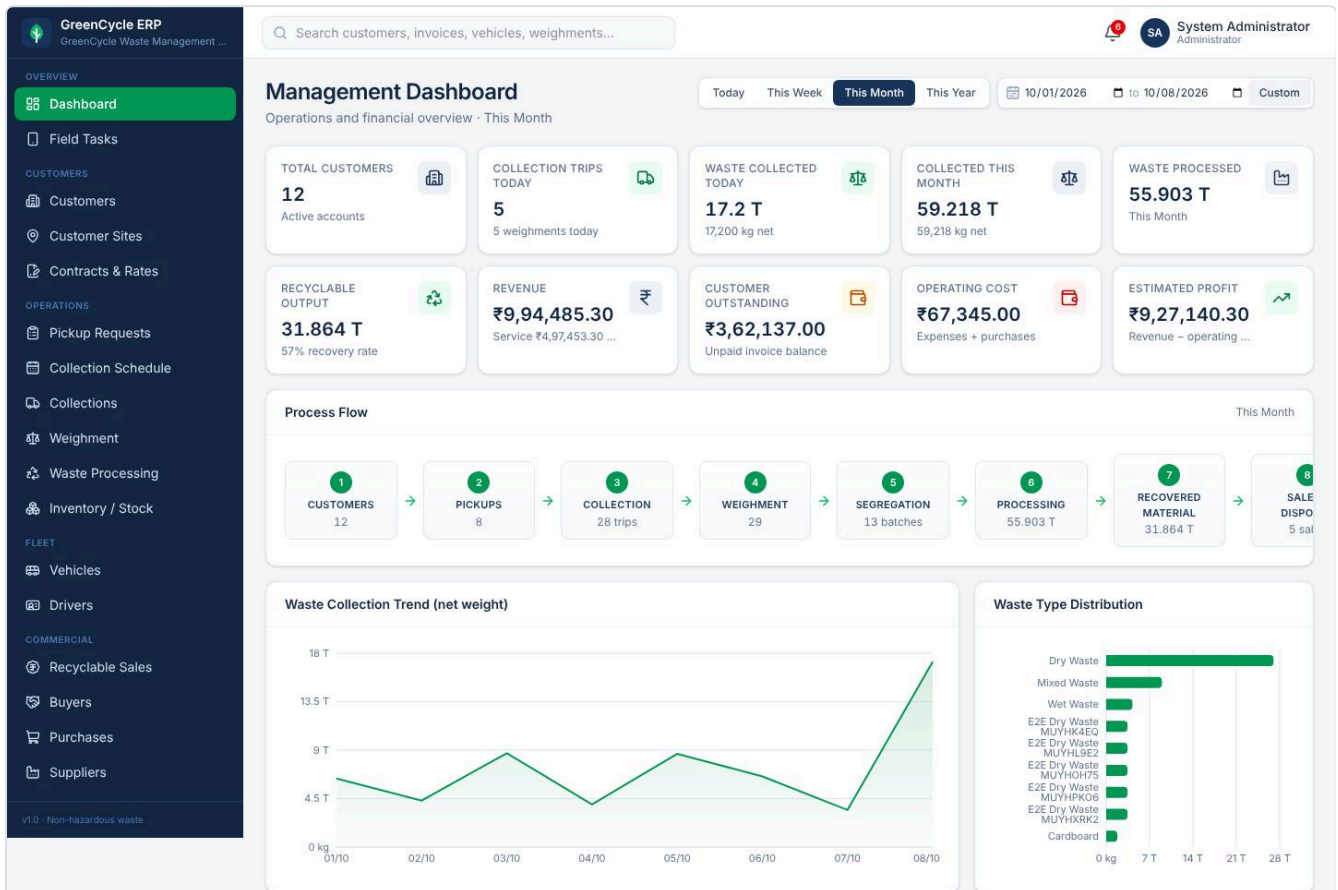

GOOD TO KNOW

After five wrong passwords the account locks for 15 minutes. This protects you — wait, then try again with the correct password.

3

The screen and the dashboard

The left menu holds the modules, the top bar holds search, alerts and your profile. The dashboard is the morning view for managers.

Management dashboard: KPI cards, process flow and charts.

Reading the dashboard

- Choose **Today**, **This Week**, **This Month**, **This Year** or a custom range at top right.
- Click any process-flow box to open that module.
- Revenue, cost and profit cards appear only for roles allowed to see money.

Search and alerts

- Type in the top search box: customer, invoice number, vehicle number, slip number...
- The bell shows expiring vehicle documents, licences, contracts, overdue invoices, pending pickups and low stock.

PART II

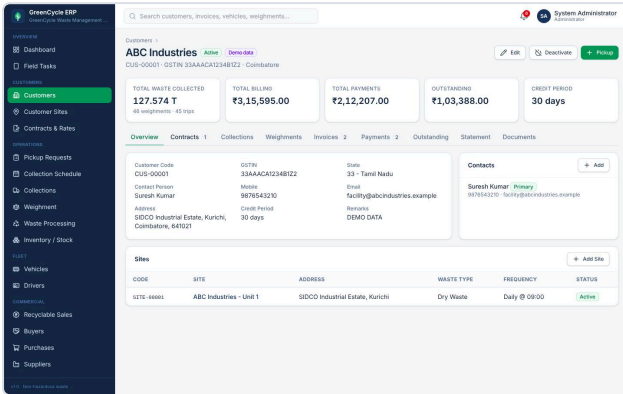

Daily work

Step-by-step instructions for each module, in the order work flows through the business.

4

Customers, sites and contracts

Set up a customer once. Their sites, rates and history then follow them everywhere.

Customer profile with totals and history tabs.

Add a customer

- 1 Customers → New Customer.
- 2 Enter name, GSTIN (the state is read from it), contact, credit period.
- 3 Create Customer. The code (CUS-00001) is automatic.
- 4 On the profile, Add Site: address, waste type, frequency, collection time.

Add a contract and rate

- 1 Contracts & Rates → New Contract, choose the customer.
- 2 Open the contract → Add Rate.
- 3 Pick the billing method: **Weight** (per kg or tonne), **Trip** (per trip) or **Monthly** (fixed).
- 4 Choose GST rate and effective date → Save.

TIP

Never edit a price directly. Use **Revise** on the rate with a new effective date. The old price stays for past work, so old invoices never change.

5

Pickups, schedule and field collection

Requests become schedules, schedules get a vehicle and driver, and drivers record the collection from their phone.

v1.0 Non-hazardous waste

Daily operations board: assign, start, complete, reschedule or cancel.

Office

- 1 Pickup Requests → New Pickup: customer, site, waste type, date.
- 2 On the pickup row press **Schedule**, pick vehicle and driver.
- 3 Daily sites: on **Collection Schedule** press **Generate daily schedules**.
- 4 Use **Start** when the vehicle leaves.

Driver on the phone

- 1 Open **Field Tasks**.
- 2 Tap **Collect** on the job.
- 3 Enter the actual quantity, tap the status, take a photo, capture GPS.
- 4 Tap **Submit Collection**.

6

Weighbridge

Gross weight when the loaded vehicle enters, tare when it leaves empty. The system calculates net weight and adds it to stock.

Gate-out: type the tare, net weight appears automatically.

- 1 **Weighment → Gate In** (or **Gate In** next to a collection).
- 2 Select vehicle, customer, site, waste type; enter **gross weight** and slip number → **Record Gate In**.
- 3 When the vehicle returns empty, open the weighment, type the **tare weight**.
- 4 Check the green net weight, then **Complete Gate-out**.
- 5 **Print Slip** for the driver.

EXAMPLE Gross 8,540 kg – Tare 5,100 kg = **Net 3,440 kg**

RULE

Net weight can only be corrected by an administrator using **Override Net**, with a written reason. The change is kept in the audit trail.

7

Processing and stock

Segregate received waste into recovered materials. What goes in must equal what comes out.

A balanced batch: $\text{Input } 1,000 = \text{Output } 620 + \text{Rejected } 300 + \text{Loss } 80$.

Post a batch

- 1 Waste Processing → New Batch.
- 2 Input: choose the unprocessed waste and quantity (available stock is shown).
- 3 Output: add each recovered material and quantity.
- 4 Enter rejected quantity and process loss — or press **Fill** to put the remainder into loss.
- 5 When the bar turns green (**Balanced**) press **Post Processing Batch**.

Stock

- **Inventory** → **Current Stock** shows every material by location.
- **Stock Ledger** shows each movement with running balance.
- **Stock Movement** records transfers, disposal of rejected waste and adjustments (reason required).

8

Sales, purchases and expenses

Sell recovered material, record supplier bills and day-to-day expenses.

Recyclable sale

- 1 **Recyclable Sales → New Sale.**
- 2 Choose buyer and stock location.
- 3 Add materials, quantity and rate; stock in hand is shown under each line.
- 4 **Save Sale & Generate Invoice.** Stock reduces automatically.
- 5 Print or download the invoice.

Purchases and expenses

- 1 **Purchases → New Purchase:** supplier, bill number, lines. Stock items go into inventory.
- 2 **Expenses → New Expense:** category, amount, GST, how it was paid.
- 3 Choose **Credit** to pay later; pay it from **Supplier Payments**.
- 4 Fuel and vehicle repairs are entered on the **vehicle page**.

9

Billing, receipts and outstanding

Invoices are calculated from real weighments, trips and contracts. Receipts reduce what the customer owes.

GreenCycle ERP

Invoices >

Generate Customer Invoice

Weight-based: quantity × rate · Trip-based: trips × rate · Monthly: contract amount. Rates are taken from the version effective on each transaction date.

Customer * ABC Industries (CUS-00001) Site (optional) All sites Period From * 10/01/2026 Period To * 10/07/2026

Calculate billable charges

DESCRIPTION	METHOD	QUANTITY	RATE	GST %	AMOUNT (QTY × RATE)
Dry waste collection & processing - weight based (7 weighments) - ABC Industries - Unit 1	WEIGHT	18,441 KG	₹2.50	18%	₹46,102.50
+ Add manual line					
Taxable value					₹46,102.50
GST (approx.)					₹8,298.45
Estimated total					₹54,400.95

Invoice Date * 10/08/2026 Notes on invoice

GST split (CGST/SGST or IGST), round-off and due date are finalised by the server when the invoice is created. The billed weighments and trips are locked to this invoice.

Create Invoice

v1.0 Non-hazardous waste

Invoice generation: unbilled weighments × the correct rate.

Raise an invoice

- 1 **Billing & Invoices** → **Generate Invoice**.
- 2 Choose customer and billing period.
- 3 **Calculate billable charges** — check the lines.
- 4 Add a manual line if needed, set the invoice date.
- 5 **Create Invoice**, then Print, Download PDF or Email.

Record a payment

- 1 **Receipts** → **New Receipt**.
- 2 Choose customer (or buyer), amount, mode, bank account, UTR / cheque no.
- 3 Press **Auto-allocate** to settle the oldest invoices first.
- 4 **Save Receipt**. Any extra amount stays as an advance.

Check what is due in **Customer Outstanding**: current, 1–30, 31–60, 61–90 and over 90 days.

10

Accounts, GST and reports

Bookkeeping happens automatically in the background. These screens let you check it.

Input	Expenses	0%	₹0.00	₹0.00	₹0.00	₹0.00	₹0.00

GST summary: output tax, input tax and net payable.

- **Accounts → Trial Balance:** always balanced; click an account for its ledger.
- **Ledger:** cash book, bank book or any account for a date range.
- **Receivables / Payables:** who owes you and whom you owe.
- **Journal Voucher:** adjustments by the accountant (debits must equal credits).
- **GST:** summary, sales register, purchase register, rates and settings.
- **Reports:** 23 reports, each with filters and **Excel**, **CSV**, **PDF**, **Print**.

PART III

Running the system

Administration, starting the app each day, and keeping your data safe.

11

Administration

For the administrator: people, company details, numbering and the audit trail.

Add a user	Users & Roles → New User → choose roles → temporary password. The user changes it at first sign-in.
Disable a user	Edit the user → Status: Disabled. They are signed out at once. Never delete people.
Reset a password	Key icon next to the user → new temporary password.
Company details	Settings → Company Profile: name, GSTIN, address, bank details printed on invoices.
Document numbers	Settings → Document Numbering: change prefixes such as INV- or WT-.
GST rates	GST → GST Rates: add or change a rate; new invoices use it, old ones keep theirs.
Master data	Waste types, materials, locations, expense categories.
Audit trail	Who changed what, when, old and new values, from which computer.

12

Starting, stopping and backing up

On the office computer the app runs while its black window is open.

Every morning

- 1 Make sure the computer is on and PostgreSQL is running (it starts with Windows).
- 2 Double-click **START-WINDOWS.bat** in the app folder.
- 3 Wait for **Ready** in the black window.
- 4 Open **http://localhost:3000**.

From a phone in the office

Find the computer's address with **ipconfig** (IPv4, e.g. 192.168.1.25) and open **http://192.168.1.25:3000** on a phone connected to the same Wi-Fi.

Stopping

Close the black window, or press **Ctrl + C** in it.

Backups — do this daily

- 1 In pgAdmin right-click **waste_erp** → **Backup...**
- 2 File name: **waste_erp_DATE.backup**, Format: **Custom** → **Backup**.
- 3 Also copy the folder **storage\uploads** (photos and documents).
- 4 Keep copies on another drive or cloud storage.

To restore: right-click **waste_erp** → **Restore...** and choose the backup file (stop the app first).

PART IV

Problems and solutions

Find the message you see on screen, read why it happens, and follow the fix.

Before you call for help

Most messages in the app tell you exactly what is wrong. They are written to protect your data, not to block you. Follow these four steps first.

1 · Read

Read the red message or the text under the field outlined in red.

2 · Find

Look up the message in the tables that follow. They are grouped by area.

3 · Fix

Correct the entry or follow the listed solution, then save again.

4 · Report

Still stuck? Screenshot the whole screen (Windows + Shift + S) and send it with what you were doing.

REASSURANCE

Nothing you do in a form is saved until it shows a green “Saved / created” message. If you see an error, your data has not changed — it is safe to try again.

A · Installing and starting the app

Problem / message you see	Why it happens	What to do
Browser shows “localhost refused to connect” / can't reach this page	The app is not running — the black window was closed, or it is still starting.	Double-click START-WINDOWS.bat , wait for Ready , then press F5 .
Black window: Node.js is not installed	Node.js is missing or the computer was not restarted after installing.	Install the LTS version from nodejs.org, restart the computer, run SETUP-WINDOWS.bat again.
“Windows protected your PC”	Windows warns about any downloaded .bat file.	Click More info → Run anyway .
Could not connect to the database or P1000 Authentication failed	Wrong PostgreSQL password.	Run SETUP-WINDOWS.bat again; it asks for the password again. Use the same password as pgAdmin.
P1001 Can't reach database server	PostgreSQL service is stopped.	Press Windows key → type services → find postgresql-x64-16 → Start . Set Startup type to Automatic.
Database waste_erp does not exist	The database was not created in pgAdmin.	pgAdmin → right-click Databases → Create → Database → waste_erp → Save. Run setup again.
@prisma/client did not initialize yet	An older copy of the setup file was used.	Download the latest ZIP from GitHub, extract over the folder, run SETUP-WINDOWS.bat .
EADDRINUSE: address already in use ::: 3000	The app is already running in another black window.	Use the window that is already open, or close all black windows and start once.

Problem / message you see	Why it happens	What to do
npm install fails with network errors	No internet, or a proxy/firewall blocks npm.	Check the internet connection and run setup again.
Page looks broken or old after an update	The browser kept the old version.	Press Ctrl + F5 .

B · Signing in and permissions

Problem / message you see	Why it happens	What to do
Invalid username or password.	Typing error, Caps Lock on, or wrong user.	Check Caps Lock and type again. Usernames are lower case.
Too many failed attempts. Account locked for 15 minutes.	Five wrong passwords in a row.	Wait 15 minutes, or ask an administrator to reset the password (this also unlocks).
This account is disabled. Contact the administrator.	The user was disabled.	Administrator: Users & Roles → edit user → Status: Active.
Your session has expired. Please sign in again.	Signed in for longer than 12 hours, or the password was changed.	Sign in again. Unsaved typing in the open form is lost.
Access denied page, or a menu item is missing	Your role does not include that module.	Ask the administrator to add the role or the extra permission.
Forgot the admin password	No self-service reset for safety.	Another administrator resets it. Keep at least two administrator users.
At least one active administrator must remain.	You tried to disable or demote the last administrator.	Give another user the Administrator role first.

C · Pickups, collection and weighbridge

Problem / message you see	Why it happens	What to do
Assign a vehicle and driver before starting the collection.	The schedule has no vehicle or driver.	Press Assign on the schedule row first.
The selected site does not belong to the selected customer.	Customer changed after choosing the site.	Select the customer again, then pick the site from the refreshed list.
Only pending pickups can be edited.	The pickup is already scheduled.	Change the date with Reschedule on the Collection Schedule.
Enter the estimated or actual quantity collected.	Quantity left empty.	Type the quantity, or choose status Not collected .

Problem / message you see	Why it happens	What to do
Tare weight must be less than gross weight.	Tare typed wrongly, or gross was entered wrongly at gate in.	Re-read the weighbridge. If gross was wrong, cancel the weighment (with reason) and gate in again.
Vehicle already has an open weighment	That vehicle's last gate-in was never completed.	Open Weighment → finish the pending gate-out (shown in amber), or cancel it with a reason.
Weighbridge slip is already used	The same slip number was entered before.	Check the slip. Every slip number can be used only once.
Gate-out time cannot be before gate-in time.	Date/time typed wrongly.	Correct the gate-out date and time.
This weighment is already billed. Cancel the invoice first.	You tried to change or cancel a billed weighment.	Accounts cancels the invoice (if unpaid), then correct the weighment and bill again.
“Override Net” button is not visible	Only administrators can override.	Ask an administrator, with the reason for the change.

D · Processing and stock

Problem / message you see	Why it happens	What to do
Quantities do not balance ... Unexplained difference: 40 KG	Input ≠ output + rejected + loss.	Recheck the quantities, or press Fill to put the remaining kilograms into process loss.
Insufficient stock of ... Available: ...	You are processing, selling or moving more than is in stock at that location.	Check Inventory for the right location; reduce the quantity or choose the location that holds the stock.
Outputs must be recovered materials.	An unprocessed item was chosen as output.	Pick a “Recovered ...” material.
Cannot cancel a processing batch: “Insufficient stock”	Its recovered material has already been sold.	Cancel the sale first (if unpaid), or record a stock adjustment instead.
No unprocessed stock item is configured for this waste type.	A waste type was added without its stock item.	Administrator: Master Data → Materials → add a RAW item for that waste type.

E · Sales, billing, receipts and accounts

Problem / message you see	Why it happens	What to do
There is nothing to bill for this customer and period.	All weighments are billed, the period is wrong, or the customer has no rate.	Check the period and the contract rate. Use Add manual line for one-off charges.

Problem / message you see	Why it happens	What to do
Warning: "Weighment ... has no applicable weight-based rate"	No rate covers that site, waste type or date.	Add a rate on the customer's contract with the correct effective date, then calculate again.
An active rate already exists ... Use 'Revise rate' to change it.	You tried to add a second rate for the same thing.	Use Revise on the existing rate.
Rate cannot start before the contract start date.	Effective date earlier than the contract.	Use a date on or after the contract start, or edit the contract start date.
Payments are allocated to this invoice. Cancel those receipts first.	The invoice already has money against it.	Cancel the receipt first (with reason), then cancel the invoice.
Allocation exceeds the balance	You allocated more than the invoice still owes.	Use Auto-allocate , or lower the amount. The extra stays as an advance.
Select a cash or bank account.	No account chosen for the money.	Choose Cash in Hand or the bank account.
Supplier is required for credit expenses.	Credit expense without a supplier.	Choose the supplier, or change the payment mode.
Some weighments were billed by another user. Refresh and try again.	Two people billed the same customer at once.	Refresh the page and check the invoice list before trying again.

F · Documents, email, printing and exports

Problem / message you see	Why it happens	What to do
Only PDF, JPG, PNG, WEBP, XLSX and DOCX files are allowed.	Unsupported file type (e.g. HEIC photo, .doc).	Save the photo as JPG, or the document as PDF, then upload again.
File is larger than 10 MB.	The file is too big.	Compress or scan at lower quality.
Email button says email is not configured	No mail server settings.	Download the PDF and email it yourself, or ask IT to add the SMTP settings.
PDF opens in a new tab instead of downloading	Browser preference.	Use the Download PDF button, or Ctrl + S in the PDF tab.
Excel file shows ##### in columns	Column too narrow.	Double-click the column border in Excel to widen it.

Daily and monthly checklists

A short routine keeps the books clean and the alerts quiet.

Every day

- ☐ Start the app; check the dashboard and alerts.
- ☐ Generate daily schedules; assign vehicles and drivers.
- ☐ Complete every gate-out before closing (no amber weighments left).
- ☐ Post processing batches for the day.
- ☐ Record receipts and expenses received today.
- ☐ Take the database backup.

Every week

- ☐ Dispose of rejected waste (Stock Movement → Disposal).
- ☐ Review pending pickups and overdue invoices.
- ☐ Fuel entries and repairs for every vehicle.

Every month

- ☐ Generate customer invoices for last month.
- ☐ Check Customer Outstanding and ageing; follow up 31+ days.
- ☐ Pay suppliers from Supplier Payments.
- ☐ Run GST summary and registers for your accountant.
- ☐ Check the trial balance and profitability report.
- ☐ Renew expiring vehicle documents and licences.
- ☐ Copy backups to a second location.

Glossary

Gross / Tare / Net	Loaded weight / empty weight / waste weight
Process loss	Moisture, dust and shrinkage during segregation
Advance	Money received but not yet matched to an invoice
Ageing	How many days an unpaid invoice is past its due date
Cancel	Reverses a record with a reason; nothing is deleted
